Earth's Surface Magnetism

The map shows variations in Earth's surface magnetism caused by varying concentrations of magnetic rocks and minerals in the Earth's uppermost solid rock layer, known as the lithosphere. While magnetically charged objects exert a push or a pull simultaneously in many directions, [Measuring Earth's Magnetism](#)

Based on data from Swarm, the top image shows the average strength of Earth's magnetic field at the surface (measured in nanotesla) between January 1 and June 30, 2014. The second image shows changes in that field over the same period. Though the colors in the second image are just as bright as the first, note that the greatest changes were plus or minus 100 nanotesla in a field that reaches [PHYS-2020: General Physics II Course Lecture Notes Section V](#)
